The EXIM 4-loop FIBC is the ideal solution for packing, transport and storage of bulk goods in an effective and environmentally friendly way. The EXIM FIBC has many possibilities and advantages, which enable an optimal logistic solution.

All EXIM FIBCs can comply with national and international safety requirements like:

- Tests: BVI-BE, NEL, and TÜV
- Organization: EFIBCA
- Norms: ISO9001-2000, HACCP, BRC/IOP, GMP and AIB
- Hallmark: UN
- Workload: 500 - 2500 kg

All EXIM FIBCs have the required safety label. Available with 1 or more document holders.

Printing with company logo (in one or more colors) available.

Special UV coating gives the FIBC a longer lifespan in countries with a lot of sunlight.

Many types available; with liner, coated, filling and discharging spouts, etc.

EXIM FIBCs are available from 500 to 2500 kg.

FIBCs fully according to customer requirement for an optimal logistical solution.

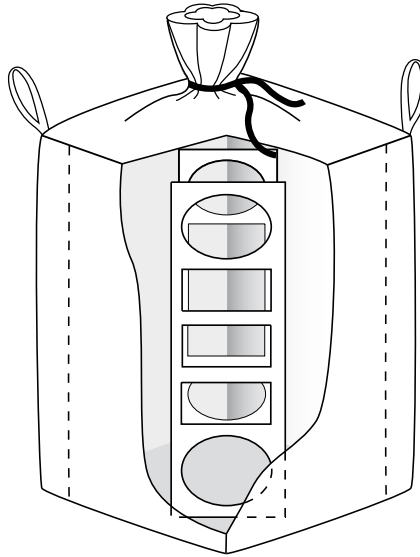

EXIM's form stabile FIBC

This Q-bag keeps its perfect square shape during filling, stocking and transport. EXIM's Q-bag is also available with polyethylene inner liner. This enables contamination free and economical packing of raw materials and products for the food and chemical industry. The PE inner liner fits perfectly into the outer bag. A pre-shaped discharging spout guarantees a complete and quick discharging of the bag. The Q-bag with PE inner liner has the same economical advantages as the standard coated Q-bag; 25 - 30% more volume in the same FIBC size.

...Your promise, our packaging

Possibilities of the Q-bag

- Form stabile
- Sturdy
- Well stackable
- Stability during transport
- Better handling
- Optimal use of space
- Ideal packing for containers/ trucks
- Extremely suitable for low weight and high volume products

Extra internal panels give the Q-bag its form stabile shape.

Q-bags can be stacked - 5 high!- with or without pallet.

EXIM's newest development: the palletless Q-bag with openings for the forks of a forklift truck.
