

...Your promise, our packaging

EXIM container liners are suitable for:

- Cereals
- Granules
- Soya
- Fish 'meal'
- Powder
- Sugar
- Rice
- Flour
- Fly ash
- Clay
- Cement
- Coffee beans

Container liners are attached like a second skin inside the container with hooks and ties.

Advantages of the EXIM container liner:

- Your product stays out of touch with the inside of the container
- Simple and quick assembly
- Lower transport costs
- Less weight, less handling
- Optimum use of available volume
- Less chance of contamination of your products; no or hardly any cleaning costs for the container
- Available in a wide range of types
- 100 % recyclable
- Available in both polyethylene as polypropylene.

EXIM-containerliners for 20, 30 and 40 ft. containers

EXIM container liners are the ideal solution for economical transport and storage of large quantities of powders or granules.

EXIM container liners made from polyethylene or woven polypropylene are suitable for every type of sea container. The liner acts like a protective skin inside the container. The container can be filled or discharges quickly through a filling or discharging spout, thus enabling transportation of up to 20 tons of material in one go.

EXIM container liners made from polyethylene or woven polypropylene are suitable for every type of sea container. The liner acts like a protective skin inside the container. The container can be filled or discharges quickly through a filling or discharging spout, thus enabling transportation of up to 20 tons of material in one go.

The EXIM delivery program: a perfect logistical solution

The flexible multi-use and environmentally friendly solution for storage, transport and distribution of bulk products.

Examples of filling and discharging spouts:

- Full opening with zip closure
- Filling and discharging spout in the centre
- Filling and discharging spout to the side
- 1 filling spout and 2 discharging spouts
- 1 filling spout and 3 discharging spouts
- Filling and discharging spout with extra ventilation
- 'Envelop' type-discharging spout

Filling and discharging through 'gravity' possible...

...or through the use of special filling and discharging equipment.

EXIM racks and scaffolding; for optimal use of your storage space

...Your promise, our packaging

EXIM specializes in bulk packaging:

- Over 20 years of experience in bulk packaging
- ISO 9001 certified
- Specialized in several types: container liners, FIBCs, etc

EXIM manu rack: mobile rack for (Euro-) pallets

The EXIM manu rack is a unique and mobile warehouse system for the storage of goods on pallets. The size or classification of your warehouse can be adapted quickly to your needs by use of the EXIM manu rack. The EXIM manu rack can be (dis-)assembled by one man. Stacking height: max. 9 meters. Suitable for pallets, size 100 x 120 cm and 80 x 120 cm.

EXIM rack: steel rack for flexible containers (FIBCs)

Optimal usage of your storage space: stacking height up to 9 meters. Suitable for all FIBCs with a bottom size of max. 96 x 96 cm. Assembly and disassembly in 20 seconds. Can be moved with both forklift truck as handpallettruck. Available in any height: standard heights are 160, 190 and 235 cm. A matching practical filling and discharging funnel is also available.

EXIM manu racks can be easily (dis) assembled by only 1 person.

The size or classification of your warehouse can be adapted quickly.
